1 Description and Intended Use

THIELE-Shortening elements (Shortening hooks, Shortening claws, Shortening devices) are intended to shorten individual chain legs within several sling chain assemblies according to EN 818-4.

Shortening elements must only be used within a single loaded chain leg.

Shortening elements must exclusively be used

- within the limits of their permissible Working Load Limit,
- for permissible attachment methods and inclination angles,
- within the temperature limits prescribed,
- by trained and authorized persons.

Shortening hooks with safety device can also be used within lashing chain assemblies according to EN 12195.

Any alternating use for lifting and lashing purposes is impermissible!

Shortening elements are as a rule not permitted for the transportation of persons.

THIELE-Shortening elements meet EG Machinery Directive 2006/42/EG requirements and feature a safety factor of at least 4 based on Working Load Limit (WLL).

The shortening elements are designed to withstand 20 000 dynamic load changes under maximum load conditions. In the event of higher loads (e.g. multi-shift/automatic operation) the Working Load Limit (WLL) must be reduced before the parts are put to use.

Shortening elements are marked with nominal chain size and quality grade, manufacturer's symbol and traceability code.

2 Safety Notes

Risk of injury!
Never walk or stay under lifted loads!
Make sure to use lifting or lashing means free from defects.

- Operators, fitters, and maintenance personnel must in particular observe the Operating Instructions of the sling chain assembly into which the shortening elements are to be installed, documentations DGUV V 1, DGUV R 100-500 Chapter 2.8, DGUV I 209-013 and DGUV I 209-021 issued by the German Employers' Liability Insurance Association as well as standard specifications DIN 685-5 and DIN EN 818-6.
- Outside the Federal Republic of Germany the specific provisions issued locally in the country where the items are used must also be observed.
- The directions given in these Mounting Instructions and specified documentations relating to safety, assembly, operation, inspection and maintenance must be made available to the respective persons.
- Make sure these Mounting Instructions are available in a place near the product during the time the equipment is used.
- When performing work make sure to wear your personal protective equipment!
- **Improper assembly and use may cause personal injury and/or damage to property.**
- Assembly and removal as well as inspection and maintenance must exclusively be carried out by skilled and authorized persons.
- Structural changes are impermissible (e.g. welding, bending).
- Visually inspect the equipment prior to each use.
- Never put to use worn-out, bent or damaged shortening elements.
- Never expose shortening elements to loads exceeding the specified Working Load Limit.

- When using shortening elements without additional safety elements (e.g. TWN 0827, TWN 1827 or TWN 0851), special care must be taken and the correct position of the chain in the shortening element is to be verified for each individual hoisting operation.
- Safety elements must not be excessively stressed or strained operationally.
- Do not use force when mounting/positioning the shortening elements.
- Do not twist or knot the chains together.
- In case of multi-leg sling chain assemblies never allow for inclination angles of less than 15 ° and in excess of 60 °.
- Avoid bending loads to act on chain links and shortening elements.
- Make sure to use shortening/grab hooks or claws for chain shortening purposes.
- In case of shortening claws only put loads on the chain exiting the claw pocket bottom.
- During lifting/hoisting make sure your hands or other body parts do not come into contact with hoisting means. Only remove hoisting means manually (use your hands).
- Avoid impacts, e.g. due to abruptly lifting loads with chain in slack condition.
- Usage without working safety elements (cotter pins, dowel pins) is not permissible.
- Shortening elements must be allowed to move freely in all tensile directions.
- In the event of doubts about the use, inspection, maintenance or similar things contact your safety officer or the manufacturer!

THIELE will not be responsible for damage caused through non-observance of the instructions, rules, standards and notes indicated!

As regards quality grade 10/XL THIELE does not give its general approval to the assembly of components stemming from different manufacturers!

Working under the influence of drugs or alcohol is strictly forbidden!

3 Commissioning

Prior to using the parts for the first time make sure that

- the parts comply with the order and have not been damaged,
- test certificate, statement of compliance, and Mounting Instructions are at hand,
- markings correspond with what is specified in the documentation,
- documentations are safely kept in an orderly manner.

Dispose of the packing in an environmentally compatible way according to local rules.

4 Technical Data

Table include only article numbers of standard and not customized parts.

WLL = Working Load Limit

4.1 Shortening Hook TWN 0827/1, Grade 8

Execution TWN 0827 without safety pin

Nominal size	Article-no.	WLL [t]	Dimensions [mm]				Mass app. [kg]
			E	G	L	B	
7/8-8	F33201	2,0	61	9	101	61	0,6
10-8	F33211	3,15	73	12	125	75	1,0
13-8	F33221	5,3	95	15	160	95	2,2

22-8	F0896228	15,0	450	100	210	Ø32x140x70	12,0

4.6 Shortening Device TWN 1896, Grade 10/XL

Nominal size	Article-no.	WLL [t]	Dimensions [mm]				Mass app. [kg]
			E	E ₁	E ₂	Intermediate link	
6-10/XL	F189606	1,4	137	31	60	Ø10x46x23	0,32
8-10/XL	F189608	2,5	175	38	78	Ø13x60x30	0,7
10-10/XL	F189610	4,0	215	46	99	Ø16x70x35	1,4
13-10/XL	F189613	6,7	270	59	126	Ø18x85x40	2,6
16-10/XL	F189616	10,0	326	76	150	Ø22x100x50	5,0

5 Assembly and Disassembly

5.1 Clevis-type Fastening System

Only chain and component of same nominal size and grade belong together!

Assembly

- If necessary, remove dowel pin and pin.
- (A) Place end of chain leg between the lateral clevis elements.
- (B) Push pin from the side fully into the clevis and through the last chain link of the leg.
- (C) Drive dowel pin fully in (must not project) to secure the pin. The slot must face away from the pin.
- Check the chain runs smoothly!

Only connect pins and attachment components of identical quality grades (starting with Ø 13 mm the pins are marked on the front end).

The dowel pins must only be installed once.

Disassembly

- Slacken the respective chain.
- (A) Drive dowel pin out using hammer and drift punch.
- (B) Push pin out.
- (C) Remove the chain.

Suitable drift punches are available by Article No. Z03303.

5.2 Shortening Device

One of the short chain legs has to be connected to the master link, may be by a ring shackle as part of a fixed sized master link assembly or by a connector.

The second short chain leg has to be connected to a shortening claw or shortening hook with clevis-type fastening system.

A longer chain leg with a hook or other device at its end to carry the load has to be mounted to the ringshackle. This chain leg can be shortened by the usage of the mounted shortening claw or shortening hook.

6 Conditions of Use

6.1 Normal Use

It is not allowed to create a 4-leg chain sling assembly made of a 2-leg chain sling assembly by adding shortening devices.

Shortening individual chain legs is indicative of a non-symmetrical load distribution. In this case, attention is to be paid to WLL reductions.

6.2 Influence of Temperature

Using shortening elements at elevated temperatures will cause the Working Load Limit to be reduced as indicated below.

Grade	Temperature range	Remaining WLL
8	-40 °C ≤ 200 °C	100 %
	200 °C ≤ 300 °C	90 %
	300 °C ≤ 400 °C	75 %
10/XL	-30 °C ≤ 200 °C	100 %
	200 °C ≤ 300 °C	90 %
	300 °C ≤ 380 °C	60 %

If the sling shortening elements have been exposed to temperatures exceeding the maximum values specified they must no longer be used.

6.3 Environmental Influence

Sling chain assemblies must not be used in environments where acids, aggressive or corrosive chemicals or their fumes are present.

Hot-dip galvanizing or a galvanic treatment is prohibited as well.

7 Spare Parts

Only use original spare parts.

7.1 Spare Parts Sets for Clevis-type Fastening System

Consisting of pin and dowel pin

Nominal size	Article-no. Set	Nominal size	Article-no. Set
6-8	F48694	6-10/XL	F48686
8-8	F48352	8-10/XL	F48687
10-8	F48355	10-10/XL	F48688
13-8	F48358	13-10/XL	F48689
16-8	F48361	16-10/XL	F48690
18-8	F48364		
20-8	F48369		
22-8	F48367		
26-8	F48373		
32-8	F48371		

7.2 Spare Parts Sets for Safety Elements TWN 0827/1, TWN 1827/1

Consisting of safety pin, spring and knurled screw

Shortening hook	Nominal size	Article-no. Set
TWN 0827/1	8-8	F48330
	10-8	F48328
	13-8	F48329
	16-8	F48339
	20-8	F48345
TWN 1827/1	6-10/XL	Please ask for
	8-10/XL	Please ask for
	10-10/XL	Please ask for
	13-10/XL	Please ask for
	16-10/XL	Please ask for

Disassembly

Remove the safety parts by cutting of the knurled screw.

Afterwards remove spring and safety pin.

Assembly

Before working on new assembly please clean the hole.

First put in the spring, afterwards take the safety pin with its thin end into the spring and push it until the thread is shown on the other side of the hook body.

Check pin and spring can move easily.

Assemble knurled screw and secure it by three punch marks on the thread against unintended opening.

8 Inspections, Maintenance, Disposal

Inspections and maintenance must be arranged for by the Owner!

Inspection intervals shall be determined by the Owner!

Inspections must be carried out and documented by competent persons regularly but at least once a year, or more frequently in case of heavy-duty service. After three years at the latest they must additionally be examined for cracks. A load test shall never be considered a substitute for this examination.

The results of the inspection shall be entered into a register (DGUV I 209-062 or DGUV I 209-063) to be prepared when the sling chain assembly is first used. The register will show characteristic data of the chains and components as well as identity details.

Immediately stop using shortening elements that show the following defects:

- missing or illegible identification/markings,
- deformation, elongation or fractures of chains or components,
- cuts, notches, cracks, incipient cracks, pinching,
- heatment beyond permissible limits,
- severe corrosion,
- reduction of the averaged pin diameter by more than 10 % as mean value of measurements taken perpendicularly towards each other,
- impaired or missing safety elements,
- missing or damaged dowel pins.

Inspection Service

THIELE offers inspection, maintenance and repair services by trained and competent personnel.

Maintenance and Repair

Maintenance and repair work must only be performed by competent persons.

Minor notches and cracks may be eliminated by careful grinding observing the maximum cross section reduction requirement of 10 % and avoid making more severe cuts or scores.

All maintenance and repair activities are to be documented.

Disposal

All components and accessories of steel taken out of service are to be scrapped in line with local regulations and provisions.

9 Storage

Make sure sling chain components are stored in dry locations at temperatures ranging between 0 °C and +40 °C.
